

Information security policy

NRS promotes high-quality, high-efficiency logistics services in consideration of ensuring information security in the development of comprehensive logistics business centered on chemical products and its associated businesses.

1. Information Security Management System (ISMS)

Those who handle information assets, such as officers and employees, recognize the importance of protecting information assets from risks such as leakage, damage, loss, etc., and establish an information security management system. We set goals to ensure information security and carry out activities to maintain information security such as confidentiality, integrity, and availability of information assets.

2. Compliance with related laws and regulations

In order to protect information assets, we will perform business in accordance with the information security policy, and will comply with laws, regulations and other norms related to information security, and contracts with customers.

3. Response to events and accidents that occur in information security

In addition to taking appropriate preventive measures against events and accidents that occur in information security, in the unlikely event that they do occur, we establish a response procedure to minimize damage in advance, and respond promptly in the event of an emergency. In addition, we will take appropriate corrective action.

4. Continuous improvement

We will continuously review and improve the information security management system.
