GPS Tracking for Containers

NRS CORPORATION will start an online GPS tracking service for containers in April 2023 to improve the efficiency of chemical logistics through DX.

What we offer:

- visualization of container location and movement history using GPS
- visualization of liquid levels, temperatures, and pressure changes in the containers.
- *Costs for GPS and other IoT equipment will be charged.

Furthermore, various information on containers will be provided free of charge on the web, irrespective of whether the GPS tracking service is used or not. Information such as,

- periodic inspection due dates and downloading inspection certificates, from April 2023
- container specifications, from April 2023
- alerts on periodic inspection due dates, from May 2023
- invoices, from May 2023.

(Link to an external site)

*X-Track is a platform provided by NRS that links container management with supply chain management.

Benefits:

- Creation of NRS digital services by integrating shipping containers and IoT devices.
- Improvement of customer satisfaction by providing more efficient information.
- Visualization of the entire supply chain for BCP measures.

NRS GROUP will contribute to the realization of a sustainable society by providing various services that are closely aligned with the business challenges of shippers under the corporate mission of "To Provide the optimal solution to the world's chemical-logistics industry, NRS has the answer".
