NRS received the Award for Excellent Business Entities Working on Modal Shift

NRS CORPORATION was awarded in the “New Development Category” at the Awards for Excellent Business Entities Working on Modal Shift Ceremony 2023 organized by the Japan Association of Logistics and Transport on November 21, 2023.

[New Development Category]

The modal shift from truck to rail transportation was achieved for the transport of chemical products from Hyogo prefecture to Shizuoka Prefecture. This covers a medium-distance transport of slightly more than 300 kilometers. The shipper supported this transition, as the reduction of environmental impact outweighed the associated disadvantages, and there were high expectations for the resolution of the “2024 problem”. The achievement of a 73% annual reduction in CO2 emissions and the alleviation of the burden on truck drivers were highly appreciated.

NRS CORPORATION Executive Director Koichi Yasuhiru)

The Award for Excellent Business Entities Working on Modal Shift is a program that aims to encourage logistics companies to take voluntary initiatives and raise awareness in society regarding the promotion of modal shift.

NRS has been awarded the Excellent Business Entities Working on Modal Shift for nine consecutive years, and this is the eighth time for the company to be awarded in the “New Development Category”.

The NRS GROUP will continue to promote modal shift and other environmentally friendly business activities to contribute to the realization of a sustainable society.
